

Responsible Environmental Management – Ironbridge Pipeline Project

17 October 2023

IRONBRIDGE PROJECT

ENVIRONMENTAL REQUIREMENTS:

- All excavations to be inspected twice a day
 - Morning – 3 hours after sunrise
 - Afternoon
- Initial resource 2 Fauna Handlers!

Humble Beginnings

Just the two of us..

Challenges

- Covid
- Heat
- Location
- Terrain
- Roster
- High client expectations

Before growing slightly bigger

- Engaged with the Nyamal People
- Over time expanding to a team of thirty-three over many job fronts

Busy Season

- Huge number of animals moving in peak breeding season
- Averaging over 100 fauna rescues a day
- Busiest day the team rescued around 200 animals

We literally had our hands full

And then the wet season hit

Bringing with it some unpleasant surprises...

Diversity

- Over 100 species
- Venomous snakes
- Lizards big and small

And even the unusual

Helping hands

- Working closely with construction
- Construction crew's efforts to help out and support positive environment outcomes

- On the project we've rescued over 1100 snakes
- In June alone we removed 328 snakes from the trench, 90% were venomous

Environmentally conscious decisions

- Rehab of rocky area at KP18
- Saving the habitat tree of nesting Australian Ringneck Parrots at 6-mile creek

Safety First

- Importance of the role from both the safety and the environmental perspective

Fiona – FMG Cultural heritage

THANK YOU

MPK. Right solutions. Right people. Right for the future.
